PROFILE

Solutions architect for managed security operations. I design the detection layer end to end: use cases, correlation, automation, and the platforms that run them. Current focus: putting AI agents into the SOC's operational loop, with PoC-backed decisions before anything reaches production.

Domain: SIEM · SOAR · XDR · VM · NAC · SSE · DLP · CTI

EXPERIENCE

Widefense | Cybersecurity Solutions Architect
Feb 2026 - Present

Technical lead for MSOC service architecture: detection engineering, automation, PoC research, and platform lifecycle across the SIEM/SOAR estate.

- **Detection engineering:** translated 560 LogRhythm AIE rules into a structured use case matrix with MITRE ATT&CK mapping and CIS Controls alignment, enabling cross-platform comparison (LogRhythm, Sentinel, Splunk, QRadar, Wazuh).
- **Agentic AI in the SOC:** I manage a work-sanctioned AI agent project inside the MSOC: a customized SOC agent deployed into the service's operational loop (alert triage, case enrichment, IR support), plus a dedicated architecture workspace with detection-engineering records, automation specs, and runbooks as procedural memory.
- **Cloud security:** Microsoft Sentinel and Defender for Cloud administration: analytics rules, automation playbooks, advanced hunting (KQL), incident resolution, IOC support.
- **Automation:** SOAR playbook design and implementation to scale the service and streamline internal processes.
- Cost optimization and audit/compliance documentation for clients and regulators.

Widefense | Cybersecurity Analyst
Aug 2024 - Feb 2026

Administration and optimization of security platforms (SIEM, VM, XDR).

- **SIEM (LogRhythm):** Use case design, false positive reduction, parser development.
- **VM (Qualys/Tenable):** Risk-based prioritization, remediation tracking.
- **Endpoints (Trellix):** Policy orchestration and hardening.
- **DRP (ZeroFox):** Brand monitoring and takedowns.

Widefense | Continuous Management Intern
May 2024 - Aug 2024

Hands-on experience with LogRhythm and SIEM management.

PROJECTS

Hermes Agent: Autonomous AI Assistant Platform (May 2026 - Present)
A self-hosted AI assistant that runs 24/7 on my own Linux infrastructure, built from open-source components and funded by me. It uses the same architectural patterns as the SOC agent I manage at Widefense, applied to my own workflows instead of a corporate SOC.

- Orchestrates parallel subagent workflows for research, code review, and reconnaissance tasks.
- Automates browser interaction via Chrome DevTools Protocol (CDP) for OSINT and passive reconnaissance.

- Long-term semantic memory across sessions; scheduled cron jobs for automated threat-intel briefings and alerting.
- Integrates with external APIs: Microsoft Graph, GitHub, and security tooling.
- Proven SOC API orchestration: case creation, workflow automation, and log analysis across Wazuh, Shuffle, TheHive, and MISP.
- Runs this website's contact inbox: it reads and triages incoming mail and drafts replies for my review (see contact).

conteo2027: FEUC Live Vote Counting (Feb 2026 - Present)
Real-time vote count visualization for the PUC student federation (FEUC) elections, in collaboration with the student journalism body El Puclítico. Complete modernization of a static dashboard originally built for 2017.
github.com/NateCor/conteo2027

LogRhythm AIE Alarm Monitor (2026)
Python CLI that pulls AI Engine alarms from the LogRhythm API and filters by Risk-Based Priority. Paginated, with config via JSON/env/CLI and JSON/CSV exports.
github.com/NateCor/logrhythm-aie-alarm-monitor

LogRhythm Agent Heartbeat Monitor (2026)
Daemon that polls the LogRhythm Admin API to detect stale System Monitor agent heartbeats, with JSON-lines logging and daily summaries.
github.com/NateCor/logrhythm-system-monitor-agent-heartbeat

Full-OSS Cybersecurity Ecosystem Lab (OSSSOC) (2026 - Present)
First minimum viable product of a broader open-source SOC ecosystem I designed: Zeek network detection (DNS/HTTP/conn) plus Sysmon and Windows Security telemetry feed Wazuh (SIEM), which routes alerts through Shuffle (SOAR) into TheHive (incident response), with MISP for threat intelligence. Fully automated alert-to-case pipeline, orchestrated end to end via API.

Planned expansion: IT inventory, vulnerability management, and red teaming / security validation components.

Writing
"Gestión de vulnerabilidades: priorizar importa más que solo detectar" (Vulnerability Management: prioritizing matters more than just detecting). Widefense blog, May 2026.
widefense.com/blog

SKILLS & STACK

SIEM/SOAR: LogRhythm (Admin/Analyst), Microsoft Sentinel, Wazuh (cloud + on-prem), Shuffle SOAR, TheHive.

Platforms: Trellix ePO (SaaS/On-Prem), Qualys VMDR, Tenable.io/.sc, Security Onion, Forescout (NAC), Skyhigh (SSE), ZeroFox (DRP), Safetica DLP, MISP, eThalamus.

Technical: Linux, Cloud (AWS/Azure), Python (API integrations, automation, data analysis), KQL, JS/HTML/CSS, Networking.

Core Competencies: Solutions Architecture, Detection Engineering, Threat Intelligence, Vulnerability Management, Incident Response, MITRE ATT&CK, CIS Controls, PoC Research.

EDUCATION

Universidad Mayor
Técnico Universitario en Ciberseguridad (2024 - 2026). Graduated 2026.

Pontificia Universidad Católica de Chile
College UC, interdisciplinary program with a computer science focus. One year completed (2023).

CERTIFICATIONS (Selected)

- **Safetica:** DLP Certified (2025)
- **ZeroFox:** Power User, Intelligence, Disruption & Collections (2025)
- **Tenable:** MSSP Practitioner, Service Delivery (2024-25)
- **Forescout:** Accredited Engineer (2024)
- **Trellix:** ePO Certified Architect, SaaS Certificate (2024)
- **LogRhythm:** Platform Administrator (LRPA), Analyst, Support Engineer (2024)
- **Cisco:** CyberOps Associate, CCNA1, Networking Essentials, Intro to IoT (2024)
- **CompTIA:** A+, ITF+ (2023-2024)
- **Qualys:** VMDR, Cloud Agent, Patch Management (2024)
- **Red Internacional de Ciberseguridad:** Curso Universitario en Ciberseguridad, CUC 2024, 290 hrs (2025)
